

End-to-End Testing Guide

Tipster posts a verified booking-code slip → customer buys it over Mobile Money → admin reviews.
Follow the steps in order.

Mobile-first PWA

App: <https://betfluencer.apps.katumbapaul.com>

Pay-per-slip · UGX

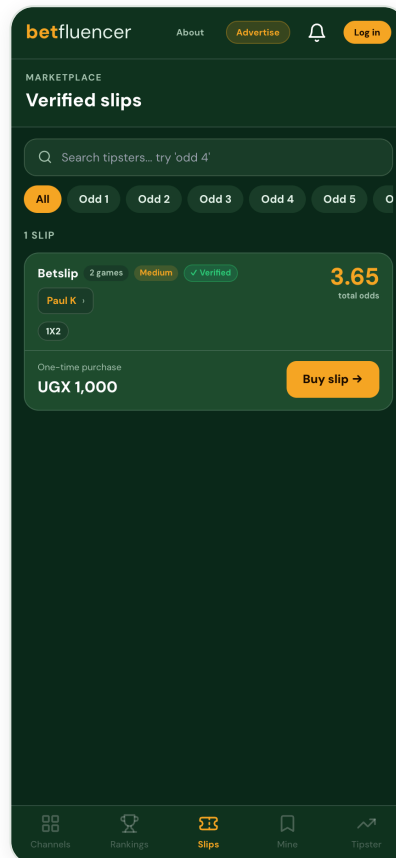

~10 min

Before you start. Make sure all three services are running: the **web app** (betfluencer.apps.katumbapaul.com), the **bet-code worker** (verifies booking codes), and ideally the **sync** poller. Payments run in **ioTec demo mode** when no live ioTec keys are set — the MoMo charge auto-succeeds with no real money moving. With live keys, an STK push is sent to the phone and must be approved on the handset.

1 Open the marketplace

1. Go to <https://betfluencer.apps.katumbapaul.com>.
2. The bottom tab **Slips** shows the **Marketplace** → **Verified slips**.

Expected: only **verified, non-expired** slips are listed. Each card shows a **✓ Verified** badge, the game count, market types (e.g. **1X2**), total odds and price — but the booking code and the actual picks are hidden until purchase.

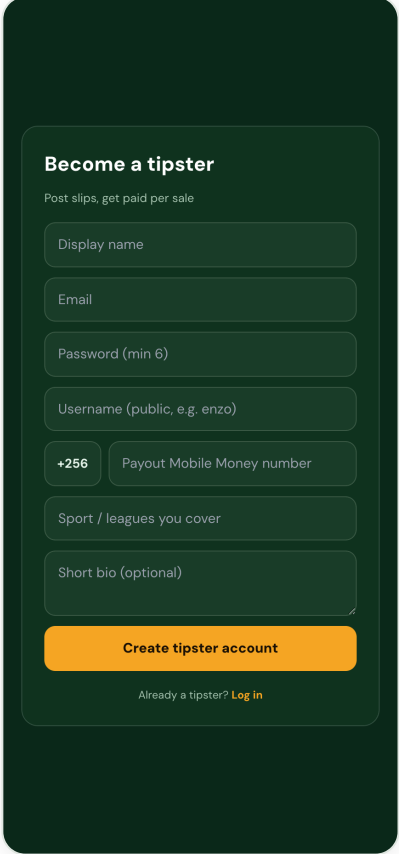

Step 1 — Marketplace (verified slips only)

2 Create a tipster account

1. Tap **Tipster** (bottom-right) → **Sign up**, or go to </tipster/signup>.
2. Fill the form, e.g.:
 - Display name: **Test Tipster**
 - Email: **test-tipster+1@example.com**
 - Password: **min 6 chars**
 - Username: **testtipster** (public handle)
 - Payout Mobile Money number: **0700000001** (this is where sales are paid out, 90%)
 - Sport / leagues + short bio (optional)
3. Tap **Create tipster account**.

Expected: account is created and you land on the **Tipster Dashboard** (Home / Post tip / My Slips / Earnings / Stats / Profile).

A screenshot of a mobile app's signup form for becoming a tipster. The form is titled "Become a tipster" with a subtitle "Post slips, get paid per sale". It contains several input fields: "Display name", "Email", "Password (min 6)", "Username (public, e.g. enzo)", "Payout Mobile Money number" (with a "+256" prefix), "Sport / leagues you cover", and "Short bio (optional)". At the bottom, there is an orange "Create tipster account" button and a link "Already a tipster? Log in".

Step 2 — Tipster signup form

SCREENSHOT: Tipster dashboard (after signup)

Header "TIPSTER DASHBOARD · Test Tipster" with the Home/Post tip/My Slips/Earnings/Stats/Profile tabs.

3 Post a tip — booking code XMRH5 (22Bet)

1. On the dashboard open the **Post tip** tab.
2. Choose the **Booking Code** method.
3. Pick the betting site: **22Bet**.
4. Enter the booking code: **XMRH5**.
5. Set a price (default **UGX 1,000**). Total odds is optional — it is filled automatically after verification.
6. Tap **Post**.

Expected: the slip is created immediately and appears under **My Slips** with the status ⌚ **Verifying...**. The booking code/site are stored privately; the slip is **not** on the marketplace yet.

SCREENSHOT: Post-tip form (22Bet + XMRH5) and/or My Slips showing "⌚ Verifying..."

Site = 22Bet selected, code XMRH5 entered; after posting, the My Slips card shows the "⌚ Verifying..." badge.

4 Wait ~2 minutes for verification

1. Behind the scenes the **bet-code worker** loads **XMRH5** on 22Bet, scrapes the selections, and a model normalises them (market, pick 1/X/2, kickoff).
2. Refresh **My Slips** after ~1–2 minutes.

Expected: the badge flips to **✓ Verified**. As the owner you now see the full content: **betting site, the booking code, each match, market (e.g. 1X2), the pick (1 / X / 2 + team), odds and kickoff**. If the code is invalid the badge shows **✗ Unverified**; if the worker is unreachable it stays ⌚ **Verifying...** and the sync poller retries.

SCREENSHOT: My Slips — verified slip with full picks

"22Bet · N legs · xodds", Code: XMRH5, ✓ Verified badge, and each leg's teams / market / pick / kickoff.

5 Confirm it on the customer marketplace

1. Open the **Slips** tab (home marketplace) — log out of the tipster first, or use another browser/incognito to view as a customer.

Expected: the now-verified slip appears in the public marketplace with a ✓ **Verified** badge and proof (games, markets, odds, price) — but the **code and picks stay hidden** behind the Buy button. (Same card layout as Step 1.)

6 Create a customer (buyer) account

1. Go to `/signup` (or the profile icon → Sign up).
2. Register a buyer, e.g. email **test-buyer+1@example.com**, password (min 6).

Expected: you're logged in as a normal user and returned to the marketplace.

Step 6 — Customer signup

7 Buy the slip over Mobile Money

1. On the verified slip card, tap **Buy slip** → **UGX 1,000**.
2. In the payment sheet enter the phone number **0111777777**.
3. Select **MTN Mobile Money**.
4. Confirm/Pay. **Demo mode:** the charge auto-succeeds. **Live mode:** approve the STK push prompt on the phone.

Expected: the payment sheet shows **Pending** → **Success**, the slip **unlocks**, and the **booking code + picks** are revealed (via the gated reveal endpoint). The sale is recorded; the tipster gets 90% instantly, platform keeps 10%.

SCREENSHOT: Payment sheet (phone 0111777777, MTN) → Success

Bottom payment sheet with the phone entered and MTN selected; then the success / unlocked state.

SCREENSHOT: Unlocked slip (code + picks revealed)

After payment: booking code XMRH5, betting site, and the full picks shown to the buyer.

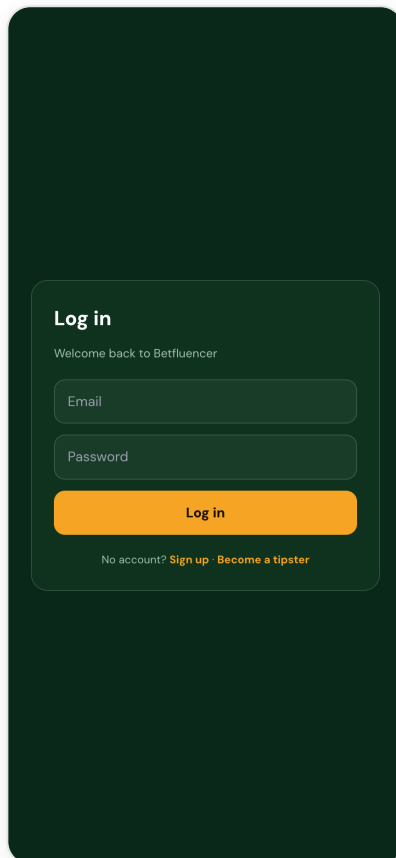

8 Review in the Admin dashboard

1. Log out, then log in as the admin at `/login` with:

- Email: `jonathanpkatumba+123@gmail.com`
- Password: `6Prayers`

2. Open `/admin`.

Expected: the admin dashboard loads with platform stats and the **Transactions** tab showing the collection (the buyer's UGX 1,000) and the payout to the tipster, plus recent activity.

Step 8 — Login screen (used for the admin sign-in)

SCREENSHOT: Admin dashboard / Transactions tab

Stats (tipsters, purchases, commission) and the Transactions ledger with the test purchase + payout.

REFERENCE

Test data & troubleshooting

WHAT	VALUE
App URL	<code>https://betfluencer.apps.katumbapaul.com</code>
Booking code / site	<code>XMRH5</code> on 22Bet
Buyer MoMo phone	<code>0111777777</code> · MTN Mobile Money
Admin login	<code>jonathanpkatumba+123@gmail.com</code> / <code>6Prayers</code>
Example tipster	test-tipster+1@example.com · username testtipster · payout 0700000001
Example buyer	test-buyer+1@example.com
Default slip price	UGX 1,000 (platform commission 10%)

Verification takes time. Loading a code on a live bookie takes a few seconds to ~2 minutes. If a slip is stuck on  **Verifying...**, the worker may be down or the code expired — the sync poller re-checks pending coded slips on its interval.

Slips disappear from the marketplace when expired. Once a slip's earliest match has kicked off by more than **90 minutes**, it drops off the customer marketplace and tipster channels (no longer buyable). The owning tipster still sees it on their own dashboard, tagged **Expired**.

Payments. In **demo mode** (no ioTec keys) the MoMo charge auto-resolves to success — ideal for testing the unlock + payout flow without real money. In **live mode**, the buyer approves an STK push on the phone; the webhook (or status poll) confirms before the slip unlocks and the tipster is paid.

The two-frame icons () mark screenshots to capture during the run (logged-in screens) and paste in. Public-page screenshots are already embedded. Betfluencer — internal QA walkthrough.
